

# Scientific Director

Sistemas Genómicos S.L. ([www.sistemasgenomicos.com](http://www.sistemasgenomicos.com)) is a biotechnology company dedicated to the investigation and diagnosis of patients suffering from hereditary pathology. Its mission is to bring genetic research to the service of society.

The company's commitment to research and innovation has led it to become an international organization with delegations in Latin America and Canada

We are currently looking for a scientific Director with extensive knowledge in genetics to define and design the strategies to be followed by the company, leading the projects and activities that derive from it, in coordination with those responsible of the different areas. Its main functions will be:

- a) To plan, organize, advice, direct and coordinate the scientific future and the research, development and innovation projects in which the company participates. Create and lead the Scientific Committee.
- b) Coordinate and monitor the scientific activities carried out at the center, establishing the order of priority of the same and ensuring compliance.
- c) Develop procedures and guidelines related to the scientific activity of the Centre.
- d) Approve the reports on the research work carried out by the center.
- e) Organize, advice, direct and coordinate the different projects and researches that are launched from the company.
- f) Plan, organize, advise, and coordinate, the acquisition of new technology (equipment, software and hardware), leading the review and technological updating Committee. Negotiate conclusions in a consensual manner with the direction.
- g) Provide technical support to the departments of the company.
- h) Communicate to the management, and the departments responsible for the findings of interest that appear.
- i) Plan strategies to improve the performance and performance of the center.
- j) Facilitate and plan scientific activities in coordination with reference centers or other companies of interest.
- k) Develop criteria for affiliation and permanence in the center.
- l) To be a facilitator of the research work of the professionals of the company.

## Requirements:

- Degree in Health sciences and doctorate in areas related to genetics.
- Experience as a researcher.
- Experience of at least 3 years occupying positions of similar responsibility.
- Accreditation of the AEGH or qualification of specialist in case of being foreign.
- Experience in database management. Good knowledge of bioinformatics.
- Experience and/or training in clinical genetics: their formation in mass sequencing will be valued.
- High level of English.

Remuneration is offered depending on the value and experience of the candidate.

Interested candidates must send a letter of introduction, indicating their experience in the technical requirements of the post to [recursoshumanos@ascires.com](mailto:recursoshumanos@ascires.com)
